

WAPH-Web Application Programming and Hacking

Instructor: Dr. Phu Phung

Student

Name: Alex May

Email: may2am@mail.uc.edu

Short-Bio: I am a third year Computer Science major; I am also getting both my bachelors and my masters through UC's ACCEND program. My end goal is to be a computer science professor. Because of the ACCEND program, I had to lose one of my CO-OPs so I have only had two rotations, with GMi Companies and with Kinetic Vision. In my personal life, I have a bearded dragon named Orion, who I love very dearly. I also crochet; I love to make things that are both cute and functional. I have made one huge king sized blanket and I currently have a second blanket in progress. I have also started getting into a style of crochet called amigurumi which is essentially dolls/stuffed animals. I made a huge Emperor Kuzco plush- which was a true labor of love. I also play flute and sing vocals in the Bearcat Jazz band. It inspired me to teach myself trombone (look up the Tennessee Waltz and just listen to that trombone). I am looking forward to class this summer.

Individual Project 1 - Personal Profile Web Page

The Projects's overview

This assignment involved designing and deploying a personal professional website that demonstrates both web development and web security concepts learned so far.

The goal of the project was to build a fully functional portfolio website hosted on GitHub Pages, while integrating dynamic front-end features, public APIs, and secure client-side programming practices. In addition, the project required implementing JavaScript-based interactivity, cookies for user tracking, and visualization tools using external libraries.

Through this assignment, I learned how to: - Build and deploy a static website using GitHub Pages - Apply responsive design using Bootstrap - Use JavaScript and jQuery for interactive features - Integrate third-party public APIs into a web application - Use cookies to track user sessions - Visualize data using Chart.js - Improve web usability and professional presentation for employer-facing portfolios

Deployed website
